

# Access Panel FR120 / Door Handle Installation

## Included:

- Spindle
- Front handle
- Front handle Cover
- Washer
- 2 Small Philips head screws
- Allen Key

Required: Philips Head screwdriver

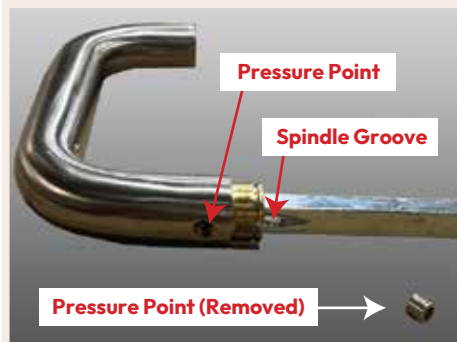

1

The Front handle is placed over the Spindle so the pressure point rests on the groove.

4

The Allen key is used to loosen and tighten the pressure point, so it locks with handle flange flush to the access panel.

The Spindle is fit into the handle so that groove rests under the pressure point.

The Allen key is used to loosen and tighten the pressure point so the spindle is locked into position with the pressure point clamping into the groove.

2

After being fit flush the front handle flange is screwed into the pre-drilled clearance holes in the access panel.

5

The washer is added over the spindle and the The washer is added over the spindle and the

3

Finally the Front handle cover is placed over the handle flange and rotated into locking position
